Beijing China

Innovative Chinese housing development featuring sweeping branches of Douglas-fir glulam.

COMPLETE HEAVY TIMBER PACKAGES

GLULAM + PARALLAM + SOLID SAWN

INNOVATIVE WOOD SPECIALISTS

- 01** 3D modelling linked to 5-axis robotic technology eliminates errors and assures a high quality product.
- 02** Premium fibre from sustainably managed forests offers a beautiful renewable building material.
- 03** Melamine glue creates aesthetically superior beams with virtually invisible lamination lines.
- 04** Choice of finish provides the look you want, from classic smooth to a rustic finish that resembles solid timber.
- 05** Complete heavy timber packages are designed and fabricated for a perfect fit and rapid assembly.
- 06** Technical support from start to finish helps you bring your design to reality.

To bring a new approach to community planning and design, Chinese developers partnered with EKISTICS Design in Vancouver to develop Vancouver Gardens, a residential community. Honoring Chinese values while incorporating Canadian styles, several homes were constructed of wood. The project showcased wood as an alternative to the more traditional concrete construction found in China. The centerpiece of the community is a one-of-a kind tower of warm wood and clear glass, framed by glulam beams and a pinwheel of glulam arches.

Our company + our technology

For over 45 years, Structurlam Products Ltd. has been a premier supplier of heavy timber packages. Working closely with architects, designers, engineers, and contractors, Structurlam provides precision shop drawings using leading edge 3D CAD software specifically produced for the timber industry. These drawings are directly linked to our European CNC machines and North America's only 5 axis Creno. Wood members are precut and combined with steel connectors for a complete package that is not only aesthetically stunning, but cost effective. No job is too complex – Structurlam will fabricate whatever you envision.
